

Batch Reporting User Guide

Last Updated: March 2014

Overview

Beginning in the 2014 reporting year, providers participating in the Medicare EHR Incentive Program can submit their attestation with other members of their medical group or hospital system who are also participating in the program. The Attestation Batch Upload option allows multiple eligible professionals or multiple eligible hospitals to submit attestations in a single file through the CMS Registration and Attestation System.

Although this option enables groups to submit their attestations together, payments for the Medicare EHR Incentive Program are provided to individuals, not to medical groups or hospital systems as a whole. Providers participating in the Medicaid EHR Incentive Program should check with their state to determine if batch reporting is available.

Please note: providers will still need to register for the Medicare EHR Incentive Program individually or designate a third party to register on their behalf.

Allowable measure category combinations

Providers have the option to submit meaningful use core and menu measures, as well as clinical quality measures (CQMs) through batch reporting. Providers must use 2014 certified EHR technology to participate in batch reporting. Below are the possible combinations for submitting batch attestations:

- Meaningful use core measures and meaningful use menu measures
- Meaningful use core measures, meaningful use menu measures, and CQMs
- CQMs only

When uploading CQMs into the Registration and Attestation System, be sure to:

- Mark the meaningful use core and menu measures categories as "completed"
- Make sure you are not Medicare Advantage-Affiliated

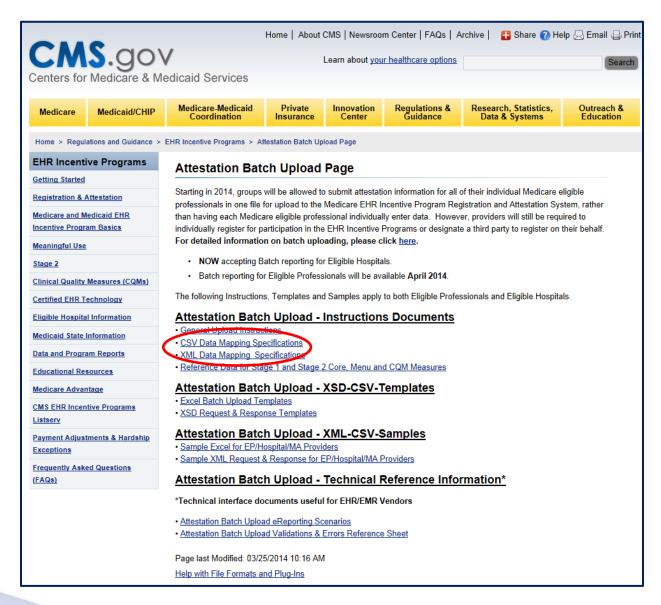

Receive credit for quality reporting

Medicare providers have the option of submitting CQM data electronically to receive credit for quality reporting programs and the Medicare EHR Incentive Program.

Eligible professionals can submit their CQM data through the Physician Quality Reporting System (PQRS), and hospitals through the Inpatient Quality Reporting (IQR) program.

How to submit attestation data

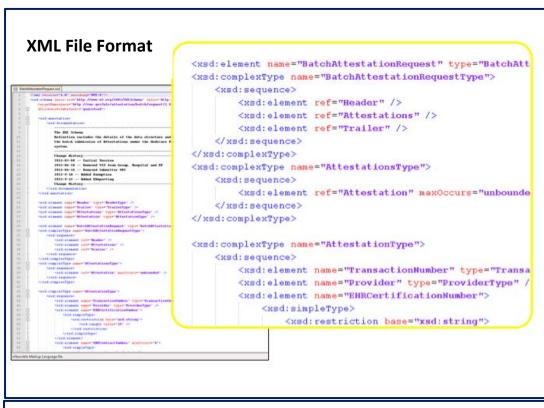

1. Begin by downloading either a CSV file or an XML file and the mapping specifications from the CMS Attestation Batch webpage.

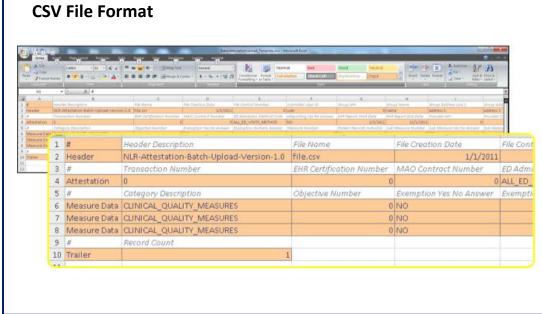

2. Use the mapping specifications to fill out the CSV or XML file. Fill out the batch file to include provider type, measure category combinations, and stage number.

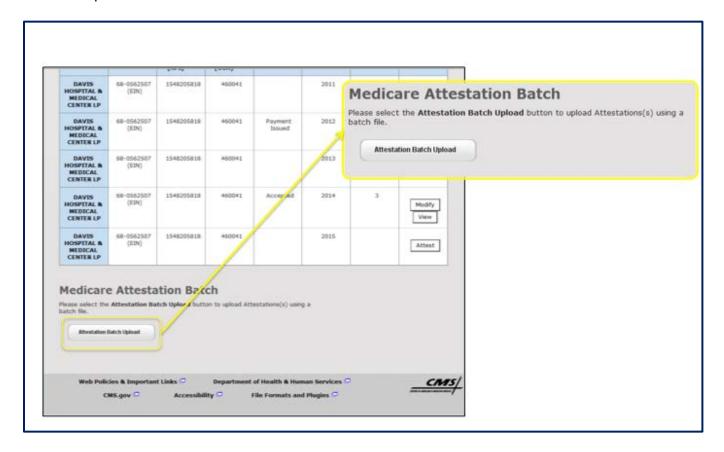

3. Access the <u>Registration and Attestation System</u> for the EHR Incentive Programs. Once you have logged into the system, select the "Attestation Batch Upload" option to submit attestations. This will allow you to submit attestations on behalf of multiple eligible professionals or hospitals.

Note: An attestation batch file can contain a maximum of 10,000 provider attestations. The upload file limit for a user is 25 batch files per day. Once you meet the maximum of 25 batch files, you will not be allowed to upload any additional files until the next day.

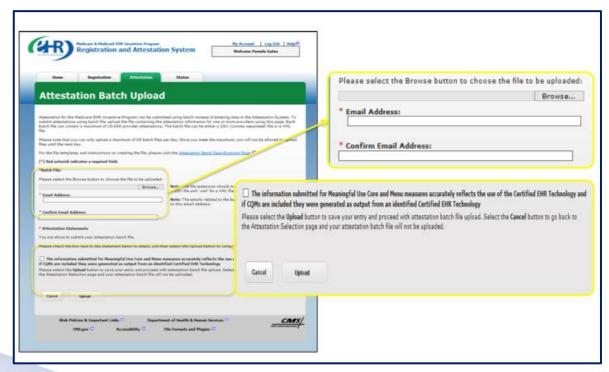

4. On the Attestation Disclaimer page, click either Agree or Disagree.

5. On the Attestation Batch Upload page, click **Browse** to choose a file. Upload the CSV or XML file with the batch attestation data.

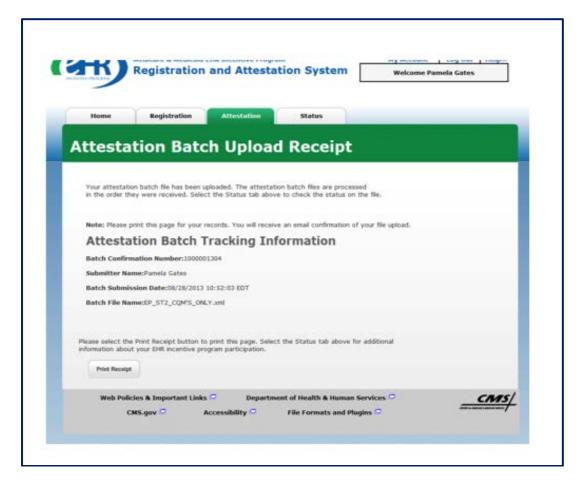

Note: The file extension should match the batch file format: '.csv' for a CSV file or '.xml' for an XML file.

Once you have uploaded your attestation data, enter your email address and review the attestation statement. Mark the attestation statement box and then click the "Upload" button to submit your batch data.

6. Once your attestation batch has been submitted, you will see a receipt page. This will include the batch confirmation number, submitter's name, batch submission date, and file name. Please print your receipt.

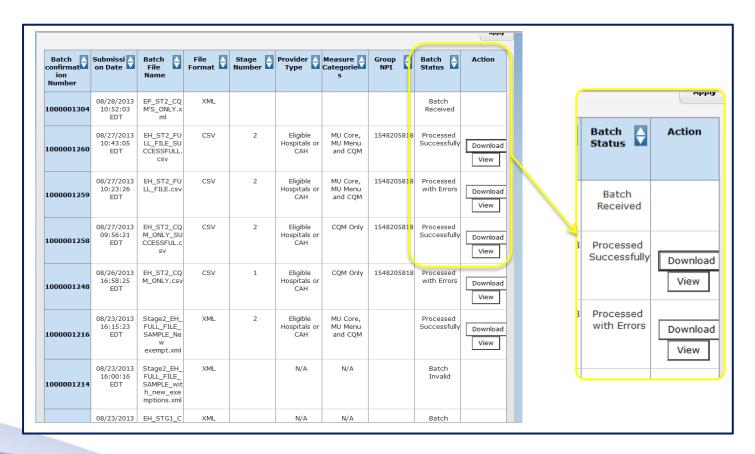

Review batch attestation status

- 1. On the Status tab of the Registration and Attestation System, click the View Attestation Batch Status button near the bottom of the screen. This will give you an opportunity to review the batch data you submitted.
- **2.** The Attestation Batch Status page will display one of the following batch statuses and the actions that are available for each batch file:
 - Batch received file was uploaded and is waiting to be processed.
 - **Batch invalid** file was not processed because it was an invalid format or there were data errors at the file level.
 - Processed successfully file was processed. All attestation records contained in the file were successfully uploaded into the system.
 - Processed with errors file was processed. However, one or more of the attestation records
 was invalid and could not be uploaded into the system. You may correct the errors and
 resubmit the invalid attestations.

3. If the **Download** action is available, click to download a response file with the status for each attestation that was submitted and/or the list of error messages. This file will be in the same format as the original batch file (CSV/XML) you submitted.

Note: The Download option is available only for 60 days from the batch submission date.

4. Click the **View** button to display Attestation Batch details and review the summary of individual attestation records.
